Course overview

Introduction to computer programming

Management and Artificial Intelligence

LUISS

Greetings, folks!

Welcome to the ***Introduction to Computer Programming*** course!

Important Resources

Web Resources you should have access to:

- **MyLUISS**
- **Course Syllabus**
- **Rooms and Timing**

e-Learning platform

MyLUISS is our e-Learning platform: ***It is important that you get access!***

You'll find there:

- **Slides** and other teaching material
- **Exercises**
- **Details** on exam dates, reservations, results (besides standard Luiss channels)
- **Communications** from teacher and teaching assistants

Teachers

Emilio Coppa

- 6 out of 8 CFU
- Position: Assistant Professor Tenure-Track @ LUISS
- Research topics: software testing, vulnerability detection
- Extra: Team Manager of TeamItaly, the italian cybersecurity team
- Other info: https://ecoppa.github.io
- Office Hours: send me an e-mail so we can arrange a time slot.
- Contact: `ecoppa@luiss.it`

Alessio Martino

- 2 out of 8 CFU
- Position: Assistant Professor @ LUISS
- Research topics: machine learning, big data analysis, computational biology
- Office Hours: send me an e-mail so we can arrange a time slot.
- Contact: `amartino@luiss.it`

Teaching assistants

Giorgio Piccardo

- Position: PhD Student in Cybersecurity @ Sapienza-LUISS
- Research topics: large language models, cybersecurity, blockchain
- Other info: https://giorgiopiccardo.com/
- Office Hours: send me an e-mail so we can arrange a time slot.
- Contact: `gpiccardo@luiss.it`

Ettore Di Micco

- M.Sc. in Electronic Engineering at Sapienza
- Research topics: Software Architecture and Design, Software Development and testing, Cloud Computing
- Office Hours: send me an e-mail so we can arrange a time slot.
- Contact: `edimicco@luiss.it`

Course Goals

- The course is intended to teach **basic programming concepts** to students with no prior coding experience, developing an attitude towards **computational thinking**.

- It will provide the students with:
  - an understanding of the role that computation can play in solving problems
  - the ability to write small programs to accomplish useful goals

Course Roadmap

The course will familiarise the students with computer programming and will cover the following topics:

- Introduction to computer systems
- Binary numbers and boolean logic
- Computer hardware
- Computer software
- Operating Systems essentials
- Introduction to programming languages
- Python basics
- Variables, data types, expressions
- Control structures
- Functions and modules
- Recursion
- Strings
- Lists
- Dictionaries
- Object-oriented programming and classes

Organization

Lectures + **Lab Sessions**: *Laptops at your fingertips, always!*

- **Monday** @ 14:45-16:15 (90 minutes)
  TD2a, TD2b @ Viale Romania
  (often) Theory lectures & some exercises

- **Tuesday** @ 11:45-13:15 (90 minutes)
  TD2a, TD2b @ Viale Romania
  (often) Theory lectures & some exercises

- **Wednesday** @ 14:30-15:45
  AT01 @ Viale Romania
  (often) Lab Session with TA

- **Friday** @ 19:15 - 20:30 (75 minutes)
  TD0 @ Viale Romania
  (often) Lab Session with TA

Exam

Written exam:

- **Coding** (50% of the overall grade)
- **Multiple-choice Tests** (50% of the overall grade)

In light of the LUISS Continuous Assessment verification method, we will be having 2 *in itinere* exams:

- First Intermediate Test (week 7: 20-24 October)
  - 60 minutes, 8 theory quizes, 2 coding exercises
- Second Intermediate Test (week 13: 1-5 December)
  - 75 minutes, 7 theory quizes, 3 coding exercises

Each intermediate test is a short exam on the topics covered so far. It will consist of a mixture of coding exercises and theory questions (multiple-choice quiz). Note that:

- the sum of the coding parts between the two tests yields 31 points
- the sum of the theory parts between the two tests yields 31 points

NOTE: you must be a ***compliant student*** (at least 70% of attendance) to take the intermediate tests.

Exam scenario A: compliant student passing both tests

A compliant student taking the two intermediate tests has passed the exam if:

- the sum of the coding parts from the two tests is greater than 18
- the sum of the theory parts from the two tests is greater than 18

The final exam score is computed as the average of two scores.

The student can:

- accept the score:
    - GREAT!
    - **the student has to book in the first exam date**
    - there is no need to take the exam during the exam date!
- reject the score of the second test: see *Exam scenario B*
- reject the score at both tests: see *Exam scenario C*

Exam scenario B: reduced exam

A compliant student failing (too low score) or missing the second test can take a **reduced** exam (which is similar to the second intermediate test: 75 minutes, 7 theory quizes, 3 coding exercises) **during the first exam date**.

The student passes the exam if:

- the sum of the coding parts from the first test and the reduced exam is greater than 18
- the sum of the theory parts from the first test and the reduced exam is greater than 18

The final exam score is computed as the average of these two scores.

The student cannot reject the final exam score if it is equal to or greater than 18.

Students failing the exam: see *Exam scenario C*

Exam scenario C: other situations

Students that:

- **are not compliant**
- **are taking the exam after the first exam date**
- are compliant but missed both tests
- have taken the tests but failed both tests
- have rejected the score of both tests
- have attempted the reduce exam (scenario B) and failed it ìt

have to take the **full** exam (120 minutes):

- 15 theory quizes (20 minutes)
- 5 coding exercises (100 minutes)

The final exam score is computed as the average of two parts (theory and coding).

Students cannot reject the score if it is equal to or greater than 18.
